### Projeto – Utilizando Prime Faces (Loja Virtual)

 Alterar o projeto LojaVirtual, adicionando uma nova classe bean chamada FormaPgto.

```
1 package beans;
 3 import javax.persistence.*;
5 @Entity
 6 @Table(name = "forma pgto")
 7 public class FormaPgto {
 8
 9⊜
10
       @GeneratedValue(strategy = GenerationType.IDENTITY)
11
       @Column(name = "fpg_id")
       private int id;
@Column(name = "fpg_descricao", length = 20, nullable = true)
12
13⊜
14
       private String descricao;
15⊜
       @Column(name = "fpg_num_max_parc", nullable = true)
16
       private int numMaxParc;
       @Column(name = "fpg num padrao parc", nullable = true)
17⊝
       private int numPadraoParc;
18
19⊜
       @Column(name = "fpg_intervalo_dias", nullable = true)
20
       private int intervaloDias;
21⊜
       @Column(name = "fpg_percentual_acres", nullable = true)
22
       private float percentualAcres;
23
24⊜
       public int getId() {
25
           return id;
26
27⊜
       public void setId(int id) {
28
           this.id = id;
29
30⊝
       public String getDescricao() {
31
           return descricao;
32
       public void setDescricao(String descricao) {
33⊜
34
           this.descricao = descricao;
35
36⊜
       public int getNumMaxParc() {
37
           return numMaxParc;
38
39⊜
       public void setNumMaxParc(int numMaxParc) {
40
           this.numMaxParc = numMaxParc;
41
42⊜
       public int getNumPadraoParc() {
43
           return numPadraoParc;
44
45⊜
       public void setNumPadraoParc(int numPadraoParc) {
46
           this.numPadraoParc = numPadraoParc;
47
48⊜
       public int getIntervaloDias() {
49
           return intervaloDias;
50
51⊜
       public void setIntervaloDias(int intervaloDias) {
52
           this.intervaloDias = intervaloDias;
53
54⊜
       public float getPercentualAcres() {
55
           return percentualAcres;
56
57⊜
       public void setPercentualAcres(float percentualAcres) {
58
           this.percentualAcres = percentualAcres;
59
60
61 }
```

Nome:	Data:	/	/
Nome:	_ Data	/	/

2. Criar a classe de Persistência das Formas de Pagamento:

```
package persistencia;
 3⊕ import java.io.Serializable;
 8 public class FormaPgtoDAO implements Serializable {
10
        private static final long serialVersionUID = 1L;
11
12⊝
        public static void inserir(FormaPgto formaPgto) {
13
             Session sessao = HibernateUtil.getSessionFactory().openSession();
14
             Transaction t = sessao.beginTransaction();
15
             sessao.save(formaPgto);
16
             t.commit();
17
             sessao.close();
18
19
        public static void alterar(FormaPgto formaPgto) {
20⊜
            Session sessao = HibernateUtil.getSessionFactory().openSession();
Transaction t = sessao.beginTransaction();
21
22
23
            sessao.update(formaPgto);
24
             t.commit();
25
             sessao.close();
26
27
28⊜
        public static void excluir(FormaPgto formaPgto) {
29
             Session sessao = HibernateUtil.getSessionFactory().openSession();
30
             Transaction t = sessao.beginTransaction();
31
             sessao.delete(formaPgto);
32
             t.commit();
33
             sessao.close();
34
35
36⊜
        public static List<FormaPgto> listagem(String filtro) {
             Session sessao = HibernateUtil.getSessionFactory().openSession();
38
39
             List<FormaPgto> lista = null;
40
             if (filtro.trim().length() == 0) {
                 consulta = sessao.createQuery("from FormaPgto order by fpg_descricao");
41
42
43
             else {
                 consulta = sessao.createQuery("from FormaPgto where fpg_descricao like :parametro order by fpg_descricao"); consulta.setString("parametro", "%" + filtro + "%");
44
45
46
47
             lista = consulta.list();
48
             sessao.close();
49
             return lista;
50
51
52⊜
        public static FormaPgto pesqId(int valor) {
            Session sessao = HibernateUtil.getSessionFactory().openSession();
Query consulta = sessao.createQuery("from FormaPgto where fpg_id = :parametro");
53
54
55
             consulta.setInteger("parametro", valor);
56
57
             sessao.close();
             return (FormaPgto) consulta.uniqueResult();
58
59
60 }
```

Nome:	Data: /	/

3. Criar a classe de Controle:

```
package negocio;
 3 import java.io.Serializable; ...
15 @ManagedBean
16 @SessionScoped
17 public class FormaPgtoCtrl implements Serializable{
19
           private static final long serialVersionUID = 1L;
20
           private FormaPgto formaPgto = new FormaPgto();
21
           private String filtro = "";
22
23⊜
           public FormaPgto getFormaPgto() {
24
               return formaPgto;
25
26⊜
           public void setFormaPgto(FormaPgto formaPgto) {
27
               this.formaPgto = formaPgto;
28
29
30⊝
           public String getFiltro() {
31
               return filtro;
32
33⊜
           public void setFiltro(String filtro) {
34
               this.filtro = filtro;
           }
35
36
37⊜
           public List<FormaPgto> getListagem() {
38
               return FormaPgtoDAO.listagem(filtro);
39
40
41⊜
           public String actionGravar() {
42
               FacesContext context = FacesContext.getCurrentInstance();
               if (formaPgto.getId() == 0) {
43
44
                   FormaPgtoDAO.inserir(formaPgto);
45
                    context.addMessage(null, new FacesMessage("Sucesso", "Inserido com sucesso!") );
46
47
               else {
48
                   FormaPgtoDAO.alterar(formaPgto);
49
                   context.addMessage(null, new FacesMessage("Sucesso", "Alterado com sucesso!") );
50
               return "/admin/lista_formaPgto";
51
52
           }
53
549
           public String actionInserir() {
55
               formaPgto = new FormaPgto();
               return "/admin/lista_formaPgto";
56
57
           }
58
59⊜
           public String actionExcluir() {
60
               FormaPgtoDAO.excluir(formaPgto);
61
               return "/admin/lista_formaPgto";
62
           }
64⊜
           public void onRowSelect(SelectEvent event) {
65
66
               FacesMessage msg = new FacesMessage("Forma de Pagamento Selecionada",
                       String.valueOf(((FormaPgto) event.getObject()).getId()));
               FacesContext.getCurrentInstance().addMessage(null, msg);
68
           }
69 }
```

4. Não esquecer de mapear a classe bean de Formas de Pagamento no arquivo: hibernate.cfg.xml.

```
<!-- Mapeamento das Classes -->
<mapping class="beans.Produto"/>
<mapping class="beans.Cliente"/>
<mapping class="beans.Fone"/>
<mapping class="beans.FormaPgto"/>
```

Nome:	Data:/

5. Adicionar ao arquivo pom.xml, a dependência do prime faces.

6. Criar a página xhtml para gerenciar as Formas de Pagamento, conforme o código a seguir (salvar o arquivo na pasta admin):

```
1 <!DOCTYPE html PUBLIC "-//W3C//DTD XHTML 1.0 Transitional//EN"
 2
       "http://www.w3.org/TR/xhtml1/DTD/xhtml1-transitional.dtd">
 3
 49 <html xmlns="http://www.w3.org/1999/xhtml"
5
       xmlns:ui="http://java.sun.com/jsf/facelets"
       xmlns:h="http://java.sun.com/jsf/html"
6
7
       xmlns:f="http://java.sun.com/jsf/core"
8
       xmlns:p="http://primefaces.org/ui">
9
10⊖ <h:head>
11
       <title>Lista de Formas de Pagamento</title>
12 </h:head>
13@<h:body>
       <h:form id="form">
149
15
           <p:growl id="msgs" showDetail="true" />
16
17
18⊜
           <div align="right">
19⊜
               <h:commandLink>
                   <p:graphicImage value="/publico/imagens/excel.png" width="24"/>
20
21
                   <p:dataExporter type="xls" target="tbl" fileName="f" />
               </h:commandLink>

```

Desta forma o cadastro ficará com o seguinte layout:

E ao clicar no botão inserir ou alterar, aparecerá uma janela modal, com o seguinte layout:

7. Não esquecer de rodar o script da criação da tabela de Formas de Pagamento no banco de dados.

8. Executar e fazer os testes no projeto da Loja Virtual.
